Advanced Java Programming Course

Group Project Development Instruction

- **General direction**
  - ✓ Students can't not present other's work out of the groups in which they are belonging to
  - ✓ Every group members should actively engage in the project work
  - ✓ An independent evaluation will be conducted to each members and mark will be given.
  - ✓ A single project title cannot be implemented by more than one group.
  - ✓ Direct copying of source codes from online or using 100% from artificial intelligence is strictly impossible. You can use as an assistance but not a full implementer.
- **Project MUST Contain**
  - ✓ A minimum of 5 scenes, (Users must interact via user interface, DON'T USE CONSOL)
  - ✓ Menus and Sub menus
  - ✓ Use CSS to customize the GUI
  - ✓ DATABASE (you can use one of your favorite database management tool)
  - ✓ If the system has CLIENT and SERVER side implementation, You should use **Socket Programing** to connect client with server code.
  - ✓ A minimum of 5 working principles /functionalities/ of your project ideas.
    - Examples for ATM
      - Customer authentication, Transfer, Balance checking,
      - ATM should consider amount of each cash notes when the customer try to withdraw.
        - ❖ If the customer wants to withdraw 5000 ETB, the ATM should analyze how many 5, 10, 50, 100 and 200 cash not are available and which combination of this notes with a total sum of 5000 ETB should be given for the customer.
  - ✓ Include multithreading if there is a possibilities in your project scope.
  - ✓ Don't use highly colorful backgrounds unnecessarily for the scene.
  - ✓ A group members profiles displayed when **Show Group member** button is clicked.
    - Including University logo, college, department, project title, academic year, and Group members name and ID.
  - ✓ ZIP your project source code including database and send via alexatgondar2011@gmail.com
